

INNER MORAY FIRTH DIGITAL ATLAS

INNER MORAY FIRTH INTERPRETATION

A comprehensive study of the Inner Moray Firth based on WesternGeco's significant 2D datasets and especially those shot in the late 1980's which were reprocessed (Kirchoff Pre-Stack Time Migration) at the end of 2004. This seismic has been used in conjunction with potential filed datasets to provide control on regional structure.

As is well documented the western part of the study area is different from the other main producing basins in the UKCS where the Upper Jurassic Kimmeridge Clay is the primary source rock. In the west one relies on Devonian and Middle Jurassic source rocks. There is a complete re-evaluation of the Devonian play based on new interpretation of Devonian source rocks. Evaluating and quantitatively describing all these petroleum systems is the key to successful exploration.

This digital atlas brings together a comprehensive structural picture as well as a review of reservoir and source rock distribution with migration timing maps. WesternGeco's reprocessed seismic (over 5,529 kms) together with potential field data has been used to generate the regional structure maps and identify play types. Integrated Geochemical Interpretation (IGI) have reviewed all the petroleum systems including their quality and more importantly documented timing of maturation (vs structuring) and volumes of oil generated.

Contents:

- Database Map
- Exploration History
- Lithostratigraphy + Reservoirs and Seals (x 2)
- Structural Elements
- Well Correlations (x 6)
- Synthetics
- Top Devonian Depth Structure Map
- Base Jurassic Depth Structure Map
- Base Lower Cretaceous Depth Structure Map
- Base Upper Cretaceous Depth Structure Map
- Top Chalk/Base Tertiary Depth Structure Map
- Sea Floor Depth Map
- Gravity Maps (x 9)
- Gravity/Magnetic Interpretation
- Dip and Strike Seismic Lines
- Devonian Orcadian Source Rocks
- Devonian Eday Flagstone Source Rocks
- Lower/Middle Jurassic Lady's Walk/Brora Source Rocks
- Upper Jurassic Kimmeridge Shale Source Rocks
- Orcadian Isopach (Gross)
- Eday Flagstone Isopach (Gross)
- Brora Coal Fm. Isopach (Gross)
- Net Kimmeridge Shale Isopach (Net)
- Variscan and Tertiary Uplift
- Maturity of Devonian and Jurassic Source Rocks
- Burial History Models
- Devonian Seals and Reservoirs
- Smith Bank Seal
- Golspie Seal
- Ladys Walk Isopach (Gross)
- Lower Heather Shale Isopach (Gross)
- Heather Shale Isopach (Gross)
- Kimmeridge Shale Isopach (Gross)
- Beatrice Reservoir (J44-J42)
- Ross/Parry/Alness Sandstone (J56-J54)
- Early Volgian Gross Sand Distribution (J66-J62)
- Mid Volgian Gross Sand Distribution (J73-J71)
- Late Volgian Gross Sand Distribution (J76-J74)
- K10 Sandstone Interval Map
- K20 Thief Zone
- K10 Sandstone Interval and K20 Thief Zone (Combined)
- K36/34 Sandstone Interval Map
- K38 Thief Zone
- K36/34 Sandstone Interval and K38 Thief Zone (Combined)
- K50/45 Reservoir
- Prospectivity, Dry Hole Analysis and Oil Types
- Dry Hole Analysis Panels
- Environmental Issues

Associated with this product is a complete database of Tops and Times re-picked based on The Millennium Atlas stratigraphy

Commercial Details:

The Inner Moray Firth Atlas was completed in 2005.

The cost of the atlas, exclusive of any tax, delivery and customs duties, is **£30,000**

This product is sold independently from WesternGeco's seismic as a linked PDF document with appropriate supporting ArcView® shape files.
